

# ModuMan 100

## Operating Modes:

- Joint mode
- Tool mode
- World mode
- Taught paths (Option)
- Collision Avoidance (Option)

James Fisher Nuclear Limited is registered in Scotland No.: SC204768 North Meadows,

Oldmeldrum,

Inverurie,

Aberdeenshire,

AB51 0GQ

James Fisher Nuclear Limited is a subsidiary of James Fisher and Sons plc

Responsive nuclear engineering and support services

## ModuMan 100

ModuMan 100 is designed to be the powerful manipulator workhorse of the nuclear decommissioning industry. It delivers an optimum 100KG lifting capability throughout its supremely practical 2.3-metre reach, offering outstanding dexterity with full joint control, and the rugged reliability that is essential when operating in hazardous environments.

### Simple reliable hydraulic operation

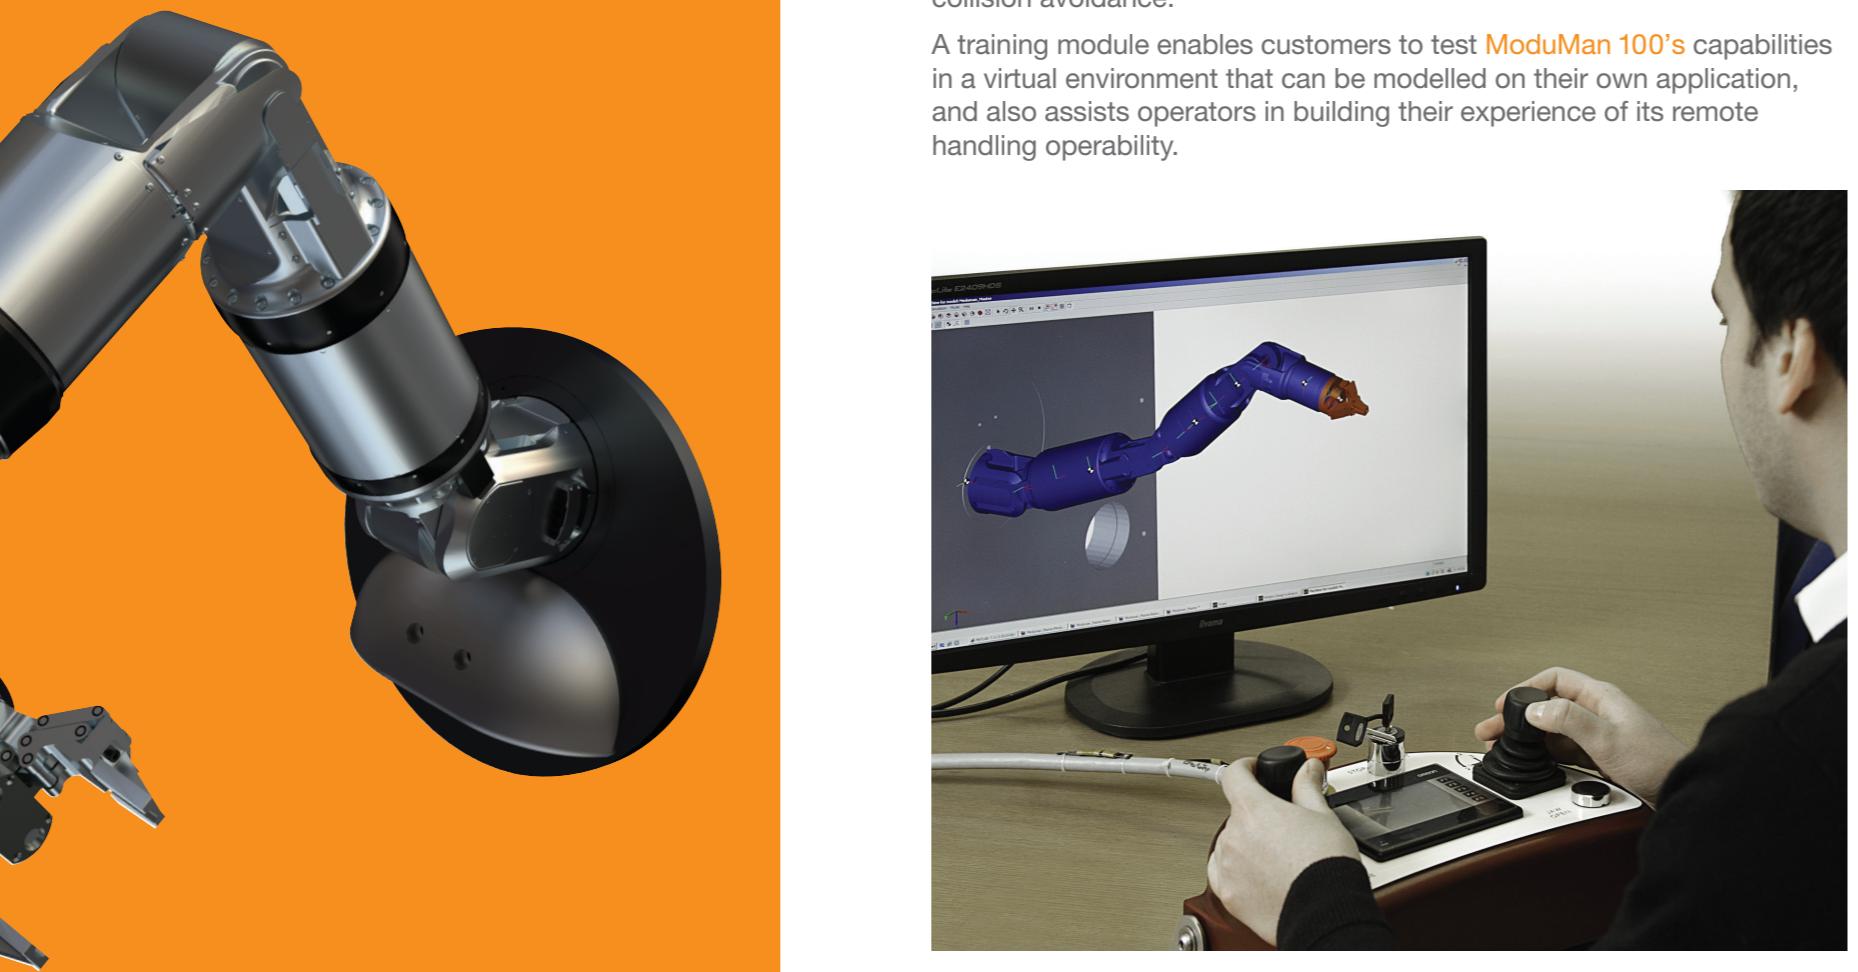

The design of the modular manipulator draws on James Fisher's experience gained over more than 25 years engineering dependable remote handling solutions for the nuclear sector.

ModuMan 100 incorporates a simple hydraulic system that ensures high performance and optimum availability. It employs proven industrial elements including resolvers, actuators, valves and sensors that are integrated and driven by sophisticated software control to produce a power manipulator that is durable, cost effective and extremely flexible.

### Easy to maintain

Ease of maintenance is a specific design requirement for ModuMan 100. Vital components are located outside the operating cell, and modular quick-swap assemblies used to effectively reduce down-time. The arm can be easily removed from cell - even when inoperative - and can be serviced and rebuilt within an active area if required.

Diagnostic functions in the control system include virtual modelling of the arm's operability and automatic fault history recovery.

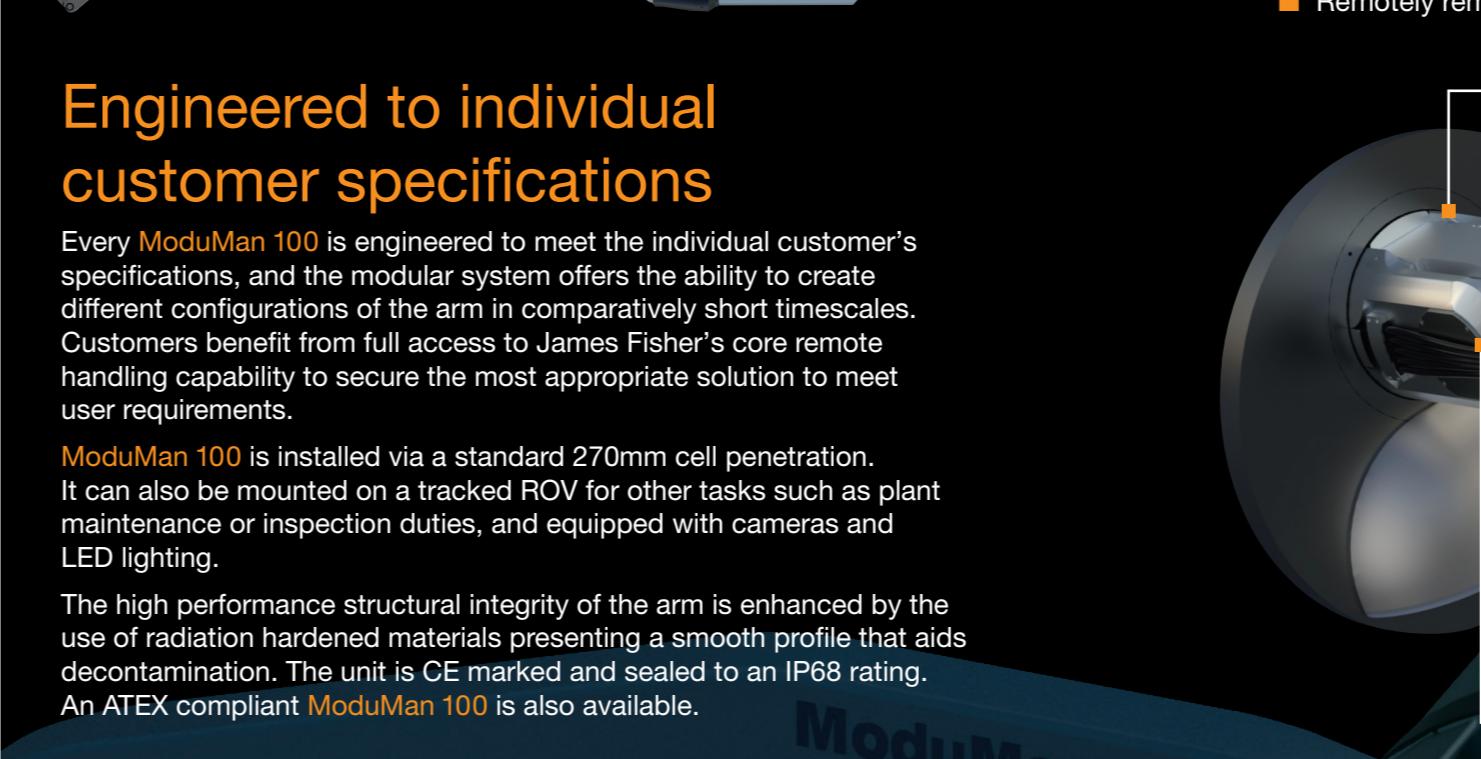

### Intuitive controls

The intuitive control system uses a Windows-based touch screen and twin joysticks desk-mounted or incorporated into a portable rig linked to the arm by an umbilical connector.

The manipulator can be operated in full joint control, world or tool modes with a resolved tip motion fitted as standard. Teach and repeat functions are accessed via the touch screen along with options that enable real-time monitoring of the arm's status, and features including collision avoidance.

A training module enables customers to test ModuMan 100's capabilities in a virtual environment that can be modelled on their own application, and also assists operators in building their experience of its remote handling operability.

### Key Features

- Heavy duty construction
- Modular design
- Six degrees of freedom
- Radiation hardened materials
- External, remote valve pack
- Simple hydraulic system
- Various control system options
- Numerous mounting arrangements
- Will fit through a 270mm penetration
- Hydraulic fluid options
- Smooth profile to aid decontamination
- Sealed IP68 rated
- 100kg Payload throughout whole range of movement
- Remotely removable/replaceable jaws

### Engineered to individual customer specifications

Every ModuMan 100 is engineered to meet the individual customer's specifications, and the modular system offers the ability to create different configurations of the arm in comparatively short timescales.
