## James Fisher Nuclear Expanding

Friday 6<sup>th</sup> December 2013

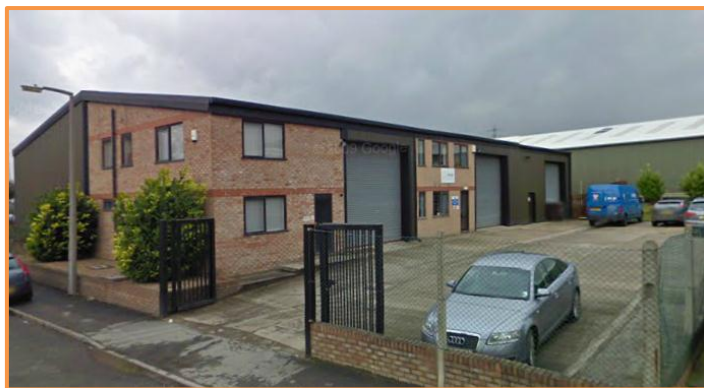

---

James Fisher Nuclear Ltd (JFN) has three new facilities to accommodate the continuing expansion of the business.

Aldermaston

In December JFN opened a new office near Aldermaston in order to support clients effectively with design and professional services. The office provides accommodation for up to eleven staff members, with expansion space available, as well as hot desk and meeting space for other James Fisher team members conducting business in the South of England.

Malton II

JFN is also in the process of taking possession of Malton II, an additional unit on the York Road Business Park. The location of the new facility couldn't be better, as it backs onto the existing Malton premises. The expansion allows an increase in manufacturing capabilities with the introduction

of three new machine centres, new assembly and test space and an enlarged electrical manufacture and assembly area. There will also be additional office space in the new building.

# PRESS RELEASE

Deeside II's first introduction to many was the highly successful JFN Instrumentation User Group Meeting in which we showcased our NDT, Instrumentation (Rados & Mirion) and Radiological Calibration facilities for a number of high profile customers, such as EDF, MAGNOX, Urenco, and the Environment Agency.

JFN Annual Instrumentation User Group Meeting 2013 at Deeside II

In recent months the facility has developed considerably; it has been fitted out with custom built conventional and digital viewing rooms, along with dark rooms and processing rooms in anticipation for the X-ray bays. Installation has started well on 2 320Kv bays and 2 160Kv bays and steel work is now up awaiting the installation of the lead panelling. Not only will this state of the art facility allow NDT to better service its existing clients, but with the increased capacity will allow them to develop business further.

The Radiological calibration facility continues to excel, in recent weeks the RCS facility has undergone a successful UKAS 17025 audit. An extension to scope now allows RCS to use their custom built EPD rig to calibrate up to 75 at any one time, this increased capacity will improve turnarounds significantly and will help drive higher revenues.
